

# MODELING AND USE OF FEM ON STATIC STRUCTURE

A SECOND YEAR PROJECT REPORT

SUBMITTED IN PARTIAL FULFILLMENT OF THE REQUIREMENTS FOR  
THE DEGREE OF B.Sc. IN COMPUTATIONAL MATHEMATICS

BY

1. Samrajya Raj Acharya (Exam Roll No.)
2. Bishesh Kafle (Exam Roll No.)
3. Priyanka Panta (Exam Roll No.)
4. Mukesh Tiwari (Exam Roll No.)

SCHOOL OF SCIENCE  
KATHMANDU UNIVERSITY  
DHULIKHEL, NEPAL

April, 2022

# CERTIFICATION

This project entitled "Modeling and use of FEM on static structure" is carried out under my supervision for the specified entire period satisfactorily, and is hereby certified as a work done by following students

1. Samrajya Raj Acharya (Exam Roll No.)
2. Bishesh Kafle (Exam Roll No.)
3. Priyanka Panta (Exam Roll No.)
4. Mukesh Tiwari (Exam Roll No.)

in partial fulfillment of the requirements for the degree of B.Sc. in Computational Mathematics, Department of Mathematics, Kathmandu University, Dhulikhel, Nepal.

---

**Dr. Gokul KC**

Assistant Professor

Department of Mathematics,

School of Science, Kathmandu University,

Dhulikhel, Kavre, Nepal

Date: April 16, 2022

## APPROVED BY:

I hereby declare that the candidate qualifies to submit this report of the Math Project (MATH-252) to the Department of Mathematics.

---

Head of the Department

Department of Natural Sciences

School of Science

Kathmandu University

Date: April 16, 2022

# CHAPTER 1

## MOTIVATION/INTRODUCTION

### 1.1 Context/Rationale/Background

In this section, the author(s) shall discuss the historical background related to the work along with the introduction of the topic in brief.

### 1.2 Objectives

1. To set up differential equations with variable boundary conditions.
2. To learn to perform numericals manually and then implement those in a high level programming language
3. To learn about FEM, its variations, and its application to various mechanical problems.
4. Visualization and Project Writing.

### 1.3 Significance/Scope

In this section, the author(s) shall discuss the relevance and the underlying problems that may rise to the need to do this project/work.

The use of numerical methods is prevalent in all fields of science and technology today. Our project focuses on one powerful numerical tool known as FEM which is theoretically sound and computationally efficient. The basic ideas of such tools which one is sure to encounter either in higher studies or at a very

## 1.4 Limitations

**In this section, the author(s) should enlist or elaborate the possible limitations of the project or the difficulty foreseeable during the work.** The project only focuses on application of FEM to a single differential equation and thus

# CHAPTER 2

## METHODOLOGY/MODEL EQUATION

### 2.1 Theoretical/Conceptual Framework

In this section, the author(s) should describe the theoretical/mathematical principles behind the whole work relative to the project. The information collected from literature review shall be relevant in this section.

# CHAPTER 3

## RESULTS AND DISCUSSIONS

### 3.1 Result1

In this chapter, the author(s) shall present the results and simulations (in the form of numerical data or graphical form) of the theory described in CHAPTER-2 and finally discuss the results.

# CHAPTER 4

## CONCLUSIONS

In this section, the author(s) shall summarize the main points and the results of the work. Include key facts from the background research to help explain your results as needed.
